

STEEL PARTITION COLLECTION

4 SYSTEMS, 25 CONFIGURATIONS, 12 HANDLES

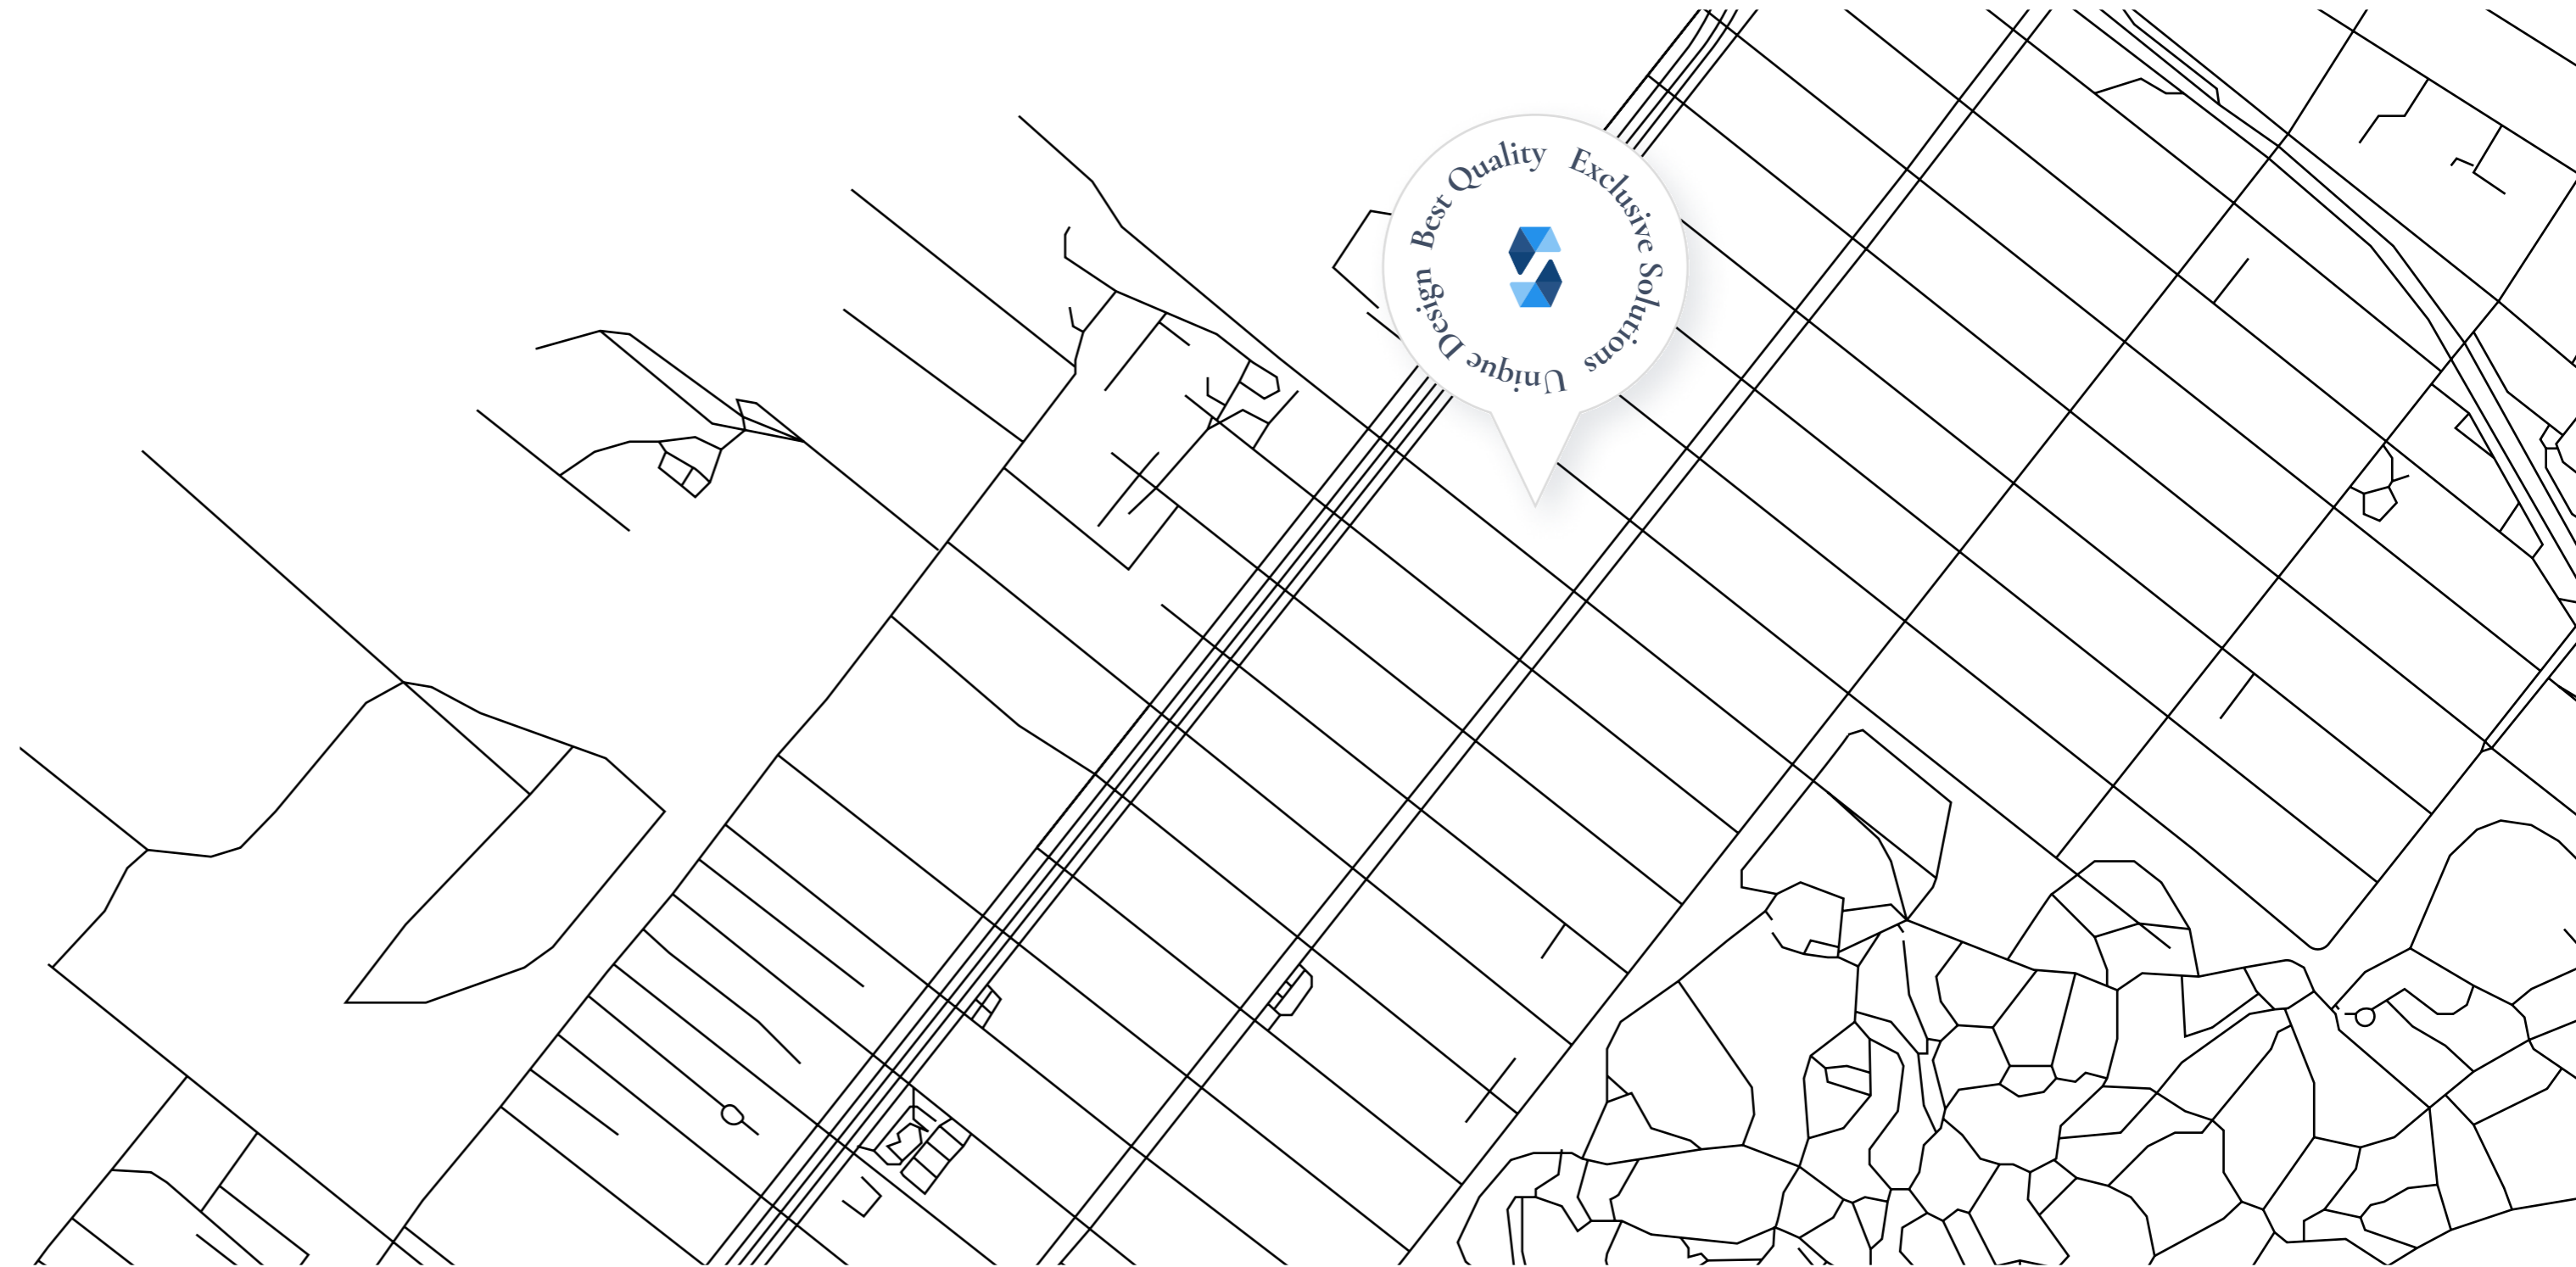

BEST QUALITY BORN HERE

Since its foundation in 2005, Crystalia has been growing exponentially, offering more custom products and covering larger markets. Throughout all this time, we have never shifted focus from the essential principles of our business: the highest quality of the products, the most flexible customization options, and exceptional customer service.

We can proudly say we are among the top glass partition manufacturers in the USA.

Our systems are always made to meet the requirements of your space, so no two projects are ever the same. What remains constant is our prices are always competitive, and our quality is the highest.

STEEL PARTITIONS

STEEL PARTITIONS

Custom steel and glass partitions are a one-of-a-kind system that Crystalia can customize to meet even the most inventive or complicated requirements. Always made to order, no two partitions are ever alike.

STEEL PARTITIONS WITH SWING DOORS

This solution is popular for spaces requiring higher sound insulation. Swing doors come with a large selection of handles and locks. The standard hardware set includes weld-on bullet hinges and a non-locking lever handle.

SYSTEM CONFIGURATION

STEEL PARTITIONS WITH SLIDING DOORS

Steel systems can be combined with single or double sliding doors, preferable for rooms with limited space for door opening. Our sliding doors are top-hung, which means there are no guides on the floor and no tripping hazards. This configuration comes with many pull handle options and a stylish locking mechanism.

STEEL PARTITIONS WITH BI-FOLDING DOORS

Bi-folding steel doors are perfect for large openings in living and conference rooms since this system can serve as a room divider when closed and can be stacked on one or two sides when not in use. The bi-folding doors are top-hung, which means they have a single top track. Besides that, the system has weld-on hinges and floor-locking flush bolts.

SYSTEM CONFIGURATION

STATIONARY STEEL PARTITIONS

Fixed steel partitions can serve both practical and decorative purposes. Vast customization options allow customers to create designs that meet all their requirements. These dividers can be infilled not only with glass but can be made entirely out of metal.

TREVI STYLE

Trevi Steel Partitions have a sophisticated but sturdy design. Trevi perimeter framing is much thicker than the interior mullions. This contrast allows us to create an airy design without sacrificing the robustness of the partition. Trevi walls are not true-divided lite systems, meaning they use large, full-height glass panes. However, this system offers many hardware, frame, and color customization options.

ROMANO STYLE

Romano Style Partition is another style of steel walls that we offer. The main difference from the Trevi style is that Romano is a true-divided lite system, i.e., each little window is a separate piece of glass. This feature allows you to combine two and more types of glass in one wall. Besides, our Romano system has a uniform look, with perimeter framing and interior mullions being exactly the same width.

GLASS CONFIGURATION

STEEL PARTITIONS OFFER
THE MOST FLEXIBILITY
WHEN IT COMES TO
GLASS THICKNESS

They can be combined with

- 3/16" ▪ 1/2"
- 1/4" ▪ 5/8"
- 3/8" ▪ 1"

01 Clear

02 Low Iron
